*based on return sales of the Night Hawk Bedwetting Alarm over the last 22 years

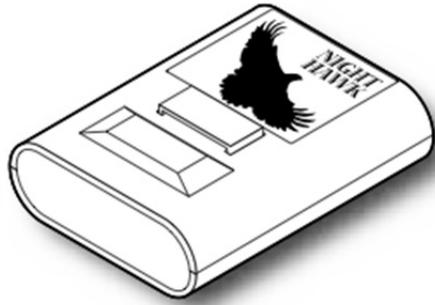

Many children and parents have a problem that is not shared with others.

It's a massive problem that can have long-term side effects on the bedwetter. Some commonly reported figures show 10% of 6 year olds, 5% of 10 year olds and 1-2% of 15 year olds still wet the bed.

Find the solution that has already helped more than 90,000 children all over the world.

Do YOU know what causes bedwetting in children?

Most pediatric departments of the hospitals around the world agree that the vast majority of bedwetting is the result of the waking response not being fully developed in all children that wet the bed. This is often misunderstood as “the child is just a heavy sleeper” when in fact the signal that triggers the waking response is simply not developed fully yet.

Do YOU know the percentage of children that right now are wetting the bed?

In a primary school with classes from grade 1 to 7, an average of 7.3% of the children still wet their beds.

Do YOU know the psychological effect that bedwetting can have on children and adolescent?

Bedwetting takes a huge emotional toll on your child, leading to feelings of inadequacy, self-consciousness, depression, bad behavior and in some extreme cases even thoughts of suicide. One American study indicated that bedwetter’s rate this problem as extremely important in their lives. Only parental death, fights and divorce were rated higher in terms of significance to a child.

Do YOU know what is not causing bedwetting in Children?

As the bedwetting happens during sleep the child has no conscious control over the bladder. In fact wetting the bed is NOT caused by:

- ❖ Being young for their age
- ❖ Laziness
- ❖ Bad behaviour
- ❖ Rebelliousness / being naughty
- ❖ Drinking after dinner.

Night Hawk Bedwetting Alarm has the power to END persistent bedwetting quickly.

The Night Hawk is a “conditioned response enuresis alarm”, which simply means that it teaches your child not to wet the bed. It does this by letting him or her know as soon as wetting starts.

To cure bedwetting, the Night Hawk must wake your child

If it does (**and it wakes 98%**) you are on your way to success, even if your child wakes wet. This does take patience. While some children are cured in just days, a typical cure can take 8 weeks.

Night Hawk Bedwetting Alarm has a proven 97% success rate*.

Though few bedwetters have an underlying physical problem, check with your doctor to rule this out.
